Preface

The Co-operative Program for Monitoring and Evaluation of the Long-Range Transmission of Air Pollutants in Europe (EMEP) and the Baltic Marine Environment Protection Commission (HELCOM) are both conducting work on air monitoring, modelling and compilation of emission inventories. In 1995, HELCOM decided to rationalize its current programs by avoiding duplication of efforts with specialised international organizations. At the request of HELCOM, the steering Body of EMEP at its nineteenth session agreed to assume the management of atmospheric monitoring data, the preparation of air emission inventories and the modelling of air pollution in the Baltic region.

Following the coordination meeting held in Potsdam in Germany and the Pollution Load Input meeting held in Klajpeda-Joudkrante in Lithuania, both 1996, it was agreed that EMEP Centres should be responsible for regular evaluation of the state of the atmosphere in the Baltic Sea region and should produce an annual joint summary report which includes updated emissions of selected air pollution, modelled deposition fields, allocation budgets and measurement data.

This report was prepared for the HELCOM, based on model estimates and monitoring results presented to the thirtieth session of the Steering Body of EMEP. Following decision of the HELCOM /MONAS-8 Meeting, it presents the results for the year 2004.

Acknowledgements

The authors are indebted to the scientific teams at MSC-E, MSC-W and CCC for providing the results included in this.

We are most grateful to Marina Varygina, Ilia Ilyin and Victor Shatalov from MSC-E, and to Heiko Klein, Vigdis Vestreng and Per Helmer Skaali from MSC-W for their help in preparation of this report.

Contents

Preface	iii
Acknowledgements	iv
Contents	v
1. Introduction	1
2. Observed Concentrations of Nitrogen, Cadmium, Lead, Mercury and Lindane at HELCOM Stations in 2004	3
2.1 HELCOM measurement stations	3
2.2 Nitrogen concentrations in air	5
2.3 Nitrogen in precipitation	7
2.4 Heavy metals in the air	9
2.5 Heavy metals in precipitation	10
2.6 Lindane (γ -HCH)	11
2.7 Laboratory and field intercomparisons	12
2.7.1 Nitrogen	12
2.7.2 Heavy metals	13
3. Atmospheric Supply of Nitrogen to the Baltic Sea in 2004	15
3.1 Nitrogen emissions	15
3.2 Annual deposition of nitrogen	22
3.3 Monthly depositions of nitrogen	25
3.4 Source allocation of nitrogen deposition	26
4. Atmospheric Supply of Lead to the Baltic Sea in 2004	29
4.1 Lead emissions	29
4.2 Annual deposition of lead	38
4.3 Monthly depositions of lead	39
4.4 Source allocation of lead deposition	40
4.5 Comparison of model results with measurements	41
5. Atmospheric Supply of Cadmium to the Baltic Sea in 2004	51
5.1 Cadmium emissions	51
5.2 Annual deposition of cadmium	60
5.3 Monthly depositions of cadmium	61
5.4 Source allocation of cadmium deposition	62
5.5 Comparison of model results with measurements	63

6. Atmospheric Supply of Mercury to the Baltic Sea in 2004	73
6.1 Mercury emissions	73
6.2 Annual deposition of mercury	83
6.3 Monthly depositions of mercury	84
6.4 Source allocation of mercury deposition.....	85
6.5 Comparison of model results with measurements.....	86
7. Atmospheric Supply of PCDD/Fs to the Baltic Sea in 2004	89
7.1 PCDD/Fs emissions	89
7.2 Annual deposition of PCDD/F	97
7.3 Monthly depositions of PCDD/F.....	98
7.4 Source allocation of PCDD/Fs deposition	99
7.4 Comparison of model results with measurements.....	100
